Scientific bio

I am a physicist of the ATLAS collaboration at the LHC, formerly CMS. I have been involved in Higgs boson physics since the start of my PhD, covering the [search for the Higgs boson](#) in WW decays; all the way until the observation of $t\bar{t}H$ in 2018, being the Higgs to WW subgroup convener. In 2011 I started studying the top quark, becoming the single top subgroup convener after achieving the [first observation of single top \$tW\$](#) .

I coordinated the whole [Top Quark Physics Analysis Group](#) in CMS from 2016 until 2018, when I left CMS to join the Uppsala ATLAS group after obtaining an individual starting grant. While in CMS, I worked extensively in detector operation, in the DT Muon chambers, and the Silicon Strip Tracker.

I was the [Outreach & Education](#) coordinator in ATLAS (2021-2023), and I was involved in the Hardware Track Trigger (HTT) project for the Phase-II Upgrade.

My group searches for a new [dark sector](#) in final states including top quarks (ATLAS-CONF-2023-021). Among other ongoing interests [machine learning](#) techniques for high energy physics and [long-lived particles](#) in future colliders are my top priorities. Concerning the later I convene both the "Direct discovery potential" working group (WG1-SRCH) of the European Committee for Future Accelerators (ECFA) [Higgs Factory Study](#) and the BSM Physics Performance group for the [Future Circular Collider \(FCC\)](#).
